

Mini-Project Abstract

Topic:

Sell Your Ideas (Sell/Request/Buy)

Sell Your Ideas is a project developed in PHP and MySQL. The objective of this project is to establish a networking between companies and their customers for exchanging ideas.

For users they can post their ideas about new products or some feature to an existing product. Companies can see these ideas as a feed on their wall. The idea feeds only display only a brief content about the actual idea. If a company likes it they can choose to buy it and learn more about the idea.

Apart from buying ideas Companies can also conduct their own polls or surveys to find the best ideas from users offering a prize for the top ideas. For example, companies can conduct surveys to find innovative ideas for their new smart phone or figure out most demanded features.

Functional Modules:

1.) Users

- Manage Profile
- Sell Ideas
- Participate in Surveys/Polls

- Payments

2.) Companies

- Manage Profile
